

Overview

Every horse on EquestriCraft is built from multiple layered systems. A horse's performance is not based on just one number, but on a combination of:

- Genetic stats
- Training potential
- Conformation
- Discipline progression
- Current training progress

This means two horses of the same breed can still perform very differently depending on their inheritance, development, and specialization.

When looking through your horse's information, the two most important stat categories are:

- **Stats**
- **Indicators**

This page focuses on the **Stats** side, along with **Conformation** and **Disciplines**.
